

INTRODUCTION

This owner's manual describes the Freedom Combi™ Inverter/Chargers from Heart Interface. These units perform three distinct functions:

1. DC to AC power inverting.
2. Automatic transfer switching between inverter power and incoming AC power.
3. Automatic 3-Stage Battery charging plus manual battery equalizing.

• The inverters provide regulated 120 Volt AC power and crystal controlled frequency from a deep cycle battery bank in specified watts:

Freedom 10 1000 watts
Freedom 15 1500 watts
Freedom 20 2000 watts
Freedom 25 2500 watts

The output is a modified sine wave and is compatible with most appliances, tools and other 120 VAC equipment. An idle circuit reduces battery power consumption when the loads are removed from the inverter. There is a low battery cutout circuit and momentary surge power of more than twice the inverter rating is available for starting electric motors. High efficiency insures the longest possible battery life between recharges.

• The internal transfer switch allows the Freedom Inverter/Charger to be connected to an external AC source and transfer the source power through to the loads. When disconnected, the transfer switch allows automatic switching back to the inverter.

The Freedom Inverter/Charger operates as a self-contained backup power system, just add batteries.

• Freedom battery chargers are electronically controlled and rated:

Model	12 Volts	24 Volts
Freedom 10	50 Amps DC	25 Amps DC
Freedom 15	75 Amps DC	N/A
Freedom 20*	100 Amps DC	50 Amps DC
Freedom 25	130 Amps DC	65 Amps DC

*Also available in 32 Volt model rated at 35 Amps DC

They are designed to rapidly and optimally recharge either wet** or gel** cell deep-cycle batteries. Battery charging is accomplished in 3 automatic stages: Bulk Charge, Acceptance Charge and Float Charge. Using a Freedom Remote Control Panel or Link Instrumentation, a manually-engaged Equalizing Charge cycle is possible.

Simple, automatic operation is made possible by the microprocessor in the Freedom Inverter/Charger. In most cases, the unit is left ON and no attention or maintenance is required.

Electronic Protection

Fast-acting electronic circuits protect the inverter from extreme overloads and short circuits. Other protection includes a low and high battery cutoff and automatic shutdown if over temperature occurs. The fault condition must be eliminated before reset will occur. Example: remove overload, recharge batteries or allow to cool. Reset by cycling the power switch on the Freedom Remote Control Panel, Link Instrument or the Freedom unit one time--OFF/ ON.

**Adjustable with optional remote (Freedom Remote Panel or Link Instrumentation)
