

PROTECT YOUR BUSINESS CYBERSECURITY: TOP TASKS

There was a cyberattack roughly every 39 seconds in 2022. That means more than 2200 attacks daily. Protect your business with these best practices.

UPDATE YOUR SOFTWARE

Software companies offer new versions not only to update features but also to fix known bugs and upgrade security. Don't ignore those update notifications, as they could include valuable protection.

ENABLE TWO-FACTOR AUTHENTICATION (F2P)

Add an extra layer of protection by requiring added information to verify identity on top of the username and password. It limits potential compromise.

CHECK LINKS BEFORE YOU CLICK

What you see may not be what you get. Hover over the target URL of the link to see where it is going before clicking.

DOUBLE CHECK SITES FOR HTTPS

Only encrypted websites will be marked HTTPS by most browsers. This marks the site as more trustworthy and secure. Don't enter data on HTTP-only site.

USE STRONG PASSWORDS

Creating more complex passwords takes a little more effort. With password managers, you don't have to worry about remembering stronger credentials. Plus, you can avoid repeating passwords across accounts.

AVOID PUBLIC NETWORKS

Wi-Fi hotspots offer convenience, but you sacrifice security. A public connection could be unencrypted, hijacked, or leave you vulnerable to malware, viruses, and log-in credential theft.

BACKUP DATA

Back up important data at least weekly, or even daily. This can protect your data from malicious action, natural disasters, or other accidents that cause data loss.

SCAN EXTERNAL DEVICES FOR VIRUSES

External storage devices can be infected with malware. Before connecting removable devices to your computer, scan them for viruses and threats.

DON'T LEAVE DEVICES UNATTENDED

Always keep your devices with you to prevent loss or theft. Plus, you'll avoid thieves accessing your passwords or other important or confidential data.

PROTECT MOBILE DEVICES

Keep your device's operating system up to date. Lock your device with a PIN and use data encryption where possible. Also, install only apps from trusted sources.

HAVE A RISK MANAGEMENT PLAN

A cybersecurity plan covering strategy and procedures and outlining how your business will react to attacks can help you cut risk and react more quickly.

EDUCATE EMPLOYEES

According to Verizon, 82% of breaches involve human errors or misuse. Teach employees about basic cybersecurity and ensure they consistently follow best practices to reduce your risk.

Next-Generation Enterprise Security and Governance Mohiuddin Ahmed, Nour Moustafa, Abu Barkat, Paul Haskell-Dowland, 2022-04-19 The Internet is making our daily lives as digital as possible and this new era is called the Internet of Everything (IoE). The key force behind the rapid growth of the Internet is the technological advancement of enterprises. The digital world we live in is facilitated by these enterprises' advances and business intelligence. These enterprises need to deal with gazillions of bytes of data and in today's age of General Data Protection Regulation, enterprises are required to ensure privacy and security of large scale data collections. However, the increased connectivity and devices used to facilitate IoE are continually creating more room for cybercriminals to find vulnerabilities in enterprise systems and flaws in their corporate governance. Ensuring cybersecurity and corporate

governance for enterprises should not be an afterthought or present a huge challenge In recent times the complex diversity of cyber attacks has been skyrocketing and zero day attacks such as ransomware botnet and telecommunication attacks are happening more frequently than before New hacking strategies would easily bypass existing enterprise security and governance platforms using advanced persistent threats For example in 2020 the Toll Group firm was exploited by a new crypto attack family for violating its data privacy where an advanced ransomware technique was launched to exploit the corporation and request a huge figure of monetary ransom Even after applying rational governance hygiene cybersecurity configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of enterprises has become wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of this network In this context this book addresses the cybersecurity and cooperate governance challenges associated with enterprises which will provide a bigger picture of the concepts intelligent techniques practices and open research directions in this area This book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation privacy and security
