Production Technology for Deep Reservoirs Yan Peng, Yishan Liu, Hongyan Qu, Feng Dong, Jiehao Wang, 2024-11-28

Underground energy is important for the whole society development but conventional underground energy is becoming exhausted. The energy for deep reservoirs usually 3500m for petroleum engineering 1000m for mining engineering is diverse including not limited shale gas oil tight gas oil hot dry rock geothermal reservoirs and coal gasification. Although it has abundant reserves the energy production from deep reservoirs is difficult in stimulations because the geological conditions for those deep reservoirs are tougher than those for conventional reservoirs such as high in situ stress obvious heterogeneity in rock properties and complex natural fracture networks. Meanwhile common technologies also have environmental impacts. The development trend of production technology for deep reservoirs requires it to be environment friendly or decrease environmental impacts at least CO<sub>2</sub> utilization may achieve this environmental aim. In order to efficiently produce energy from deep reservoirs technological innovation is booming around North America Europe and Asia. An Introduction to Reservoir Simulation Using MATLAB/GNU Octave Knut-Andreas Lie, 2019-08-08 Presents numerical methods for reservoir simulation with efficient implementation and examples using widely used online open source code for researchers professionals and advanced students. This title is also available as Open Access on Cambridge Core.
