Water Ethics Neelke Doorn, 2019-10-25 While the interdependence of the different aspects of water security and the relevance of ethical and distributive aspects is acknowledged in both policy circles and academia a comprehensive introduction to water ethics is still missing This book aims to fill that gap by exploring the common thread that follows from three current interrelated debates the allocation of water resources the human right to water and the commodification and privatisation of water services These questions create a plea for alternatives to the predominantly consequentialist approach to dealing with water issues The author explores the normative and ethical aspects of flood and water related risks and looks at the topic of responsibility who should be responsible for correcting inequities or taking remedial action in the case of pollution These and other questions to be linked to ongoing discussion in other disciplines within philosophy such as environmental ethics climate ethics the ethics of technology and climate justice making this text important across a wide range of courses for upper undergraduate and graduate students

Pricing Carbon Emissions Aviel Verbruggen, 2021-06-15 Pricing Carbon Emissions provides an economic critique on the utopian idea of a uniform carbon price for addressing rising carbon emissions exposing the flaws in the economic propositions with a key focus on the EU's Emissions Trading System ETS After an Executive Summary of the contents the chapters build up understanding of orthodox economics role in protecting the neoliberal paradigm A salient case the ETS is successful in shielding the Business as Usual activities of the EU's industry however this book argues that the system fails in creating innovation for decarbonizing production technologies A subsequent political economy analysis by the author points to the discursive power of giant fossil fuel and electricity companies keeping up a facade of Cap and Trade utopia and hiding the reality of free permit donations and administrative price control concealing financial bills mostly paid by household electricity customers The twilights between reality and utopia in the EU's ETS are exposed concluding an immediate end of the system is necessary for effective and just climate policy The work argues that the proposition of shifting to a global uniform carbon tax is equally utopian In practice a uniform price applied on heterogeneous cases is not a source of benefits but one of ad hoc adjustments exceptions and exemptions Carbon pricing does not induce innovation however assumed by the economic models used by IPCC for advising global climate policy Thus it is persuasively demonstrated by the author that these schemes are doomed to failure and room and resources need to be created for more effective and just climate politics The book's conclusion is based on economic arguments complementing the critique of political scientists This book is written for a broad audience interested in climate

policy eager to understand why decarbonizing progress is slow as it is It marks a significant addition to the literature on climate politics carbon pricing and the political economy of the environment more broadly The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license The Environment and Externality Zili Yang,2020-12-17 A comprehensive analysis of environmental externality combining theory algorithms and applications to provide a unified and balanced framework
