Ethical Issues In Design Build:

Ethical Issues in Design Build J. Paul Guyer, 2013-06-29 Design Build is a process for undertaking construction projects that has become increasingly popular. Although used to a substantive degree by private owners for many decades it was rarely used by public agency owners because competitive bidding laws required separation of the design and construction contracts. Designers, professional engineers and architects were retained under contract or employed in house by public agencies to prepare definitive drawings and specifications which were the basis for competitive bidding by construction contractors. It would be naïve to suggest that construction contractors ever enjoyed obtaining their work by competitive bidding. Indeed the opposite is the case. And by astute interaction with public policy makers the construction industry has done an excellent job of changing the laws and regulations in a vast swath of public agencies in the United States. And along with this construction contractors have convinced more private owners that they are a convenient one stop source of complete design and construction services. Indeed few construction contractors today do not have design build painted on the side of their truck. This situation raises ethical issues for professional engineers and architects. It also raises ethical issues for public agency managers many of whom may be professional engineers. And it raises business issues for private owners that they would be wise to consider. This is what we will talk about today. **Ethical Issues in Design Build** J.

Guyer, 2018-02-18 This publication discusses ethical issues for professional engineers and architects in the design build business. **Professional Ethics for the Construction Industry** Rebecca Mirsky, John Schaufelberger, 2022-06-24 This second edition of *Professional Ethics for the Construction Industry* empowers a new generation of built environment professionals to navigate the ethical challenges confronting them at every stage of a project from the initial bid to its completion and beyond. Authored by a pair of veteran educators and industry professionals this textbook introduces ethical dilemmas aspiring construction professionals will face on the job and the critical thinking skills to reason their way out of them. Written to meet curriculum requirements for all levels of construction education this book explores ethics specific to the construction industry illustrated by detailed and realistic case studies. All new chapters on privacy, cutting edge technologies and pandemic era worker protections complement chapters on perennial ethical issues surrounding the environment, client relationships and more. Features include: Completely revised and updated to reflect changes in construction technology, workforce composition and working environments. Updated to include new chapters on social media, privacy and technology and construction during a disease outbreak or natural disaster. Ideal reading for courses in professional ethics, leadership, construction law, workforce readiness and continuing education. to architecture and discusses different ways of identifying ethical content in architecture. Bridging the gap between theory and practice, the second part of the book surveys different professional settings and building project processes that frequently hold ethical concerns and charts the ethical mandates that arise from them. In the final section of the book, thirty case studies explore a wide range of ethical dilemmas encountered in architectural practice with useful guidance on how to work through them effectively. Arranged by topics that span the key phases of a project from pre design through post occupancy evaluation, these case studies allow a detailed look at ethical concerns in real life situations where multiple issues are often at stake. Each chapter begins with a detailed story involving a complicated set of practical and ethical dilemmas, exemplifying those encountered each day in the world of professional practice. Practice based topics such as contracts and project delivery methods, marketing, design services, cross cultural collaboration, virtual connectivity, social justice, and sustainable design, soft skills, and other related professional practice themes are anchored in realistic scenarios. While all the stories are fictional, in writing them, the authors drew from over seventy-five combined years of professional experience in architecture and interior design, as well as many years of academic experience in teaching professional practice and ethics to architecture and interior design students. Each story is followed by discussion questions and suggested additional resources. This book provides a unique integrated perspective into the allied fields of architecture and interior design, with topics relevant to both fields, as well as specific to each profession. It prepares students of both disciplines for the broad issues of professional practice and encourages them to become ethical practitioners, ready to contribute effectively to design teams and to ask the right questions. *Architectural Record*, 1908. *Engineering News-record*, 1917. *The Journal of the Engineering*
